

## **BASE – Bielefeld Academic Search Engine**

[BASE](#) is one of the world's most voluminous search engines especially for academic open access web resources.

As the open access movement grows and prospers, more and more repository servers come into being which use the "Open Archives Initiative Protocol for Metadata Harvesting" (OAI-PMH) for providing their contents. BASE collects, normalises, and indexes these data. The Index includes currently more than 30 million documents from more than 2,000 sources and is continuously enhanced by integrating further OAI sources.

BASE is a registered OAI service provider and contributed to the European project "Digital Repository Infrastructure Vision for European Research" (DRIVER). Database managers can integrate the BASE index into your own local infrastructure (e.g. meta search engines, library catalogues) via an interface.

BASE is operated by [Bielefeld University Library](#).
